When in freebsd you install any software using

```
cd /usr/ports/mysql56-server
make install
```

It produces a lot of output on the screen.

How you can read that output latter in a file.

I tried

```
cd /usr/ports/mysql56-server
make install > /home/mysql.install.log
```

BUT IT FAILED -(..... Any Suggestion??

Try this:

```
cd /usr/ports/mysql56-server
make install > /home/mysql.install.log 2>&1
```

Probably, some outpus is printed to `stdout`, some to `stderr`. So you can save all outputs by redirect `stderr` to `stdout`, then write `stdout` to a file.

You can also use `tee` command:

```
make install 2>&1 | tee /home/mysql.install.log
```

n.b. The `stderr` redirection is still necessary for pipes.

@Nishan

If you use `cs`h, try this:

```
make install >& /home/mysql.install.log
```

Have a look at `man script`. ;) Basically, you do `script somefile.txt`, and it will open a new shell where everything that happens gets written to `somefile.txt` (`exit` to quit).

The output you are referring to is being printed to [standard error, not standard output](#). To capture stderr, you need `2>` :

```
make install 2> /home/mysql.install.log
```

- It only record error messages. - [PersianGulf](#) Mar 9, 2014 at 17:32
- 1 @MohsenPahlevanzadeh thank you, I know. That's what I'm saying in my answer (and that's why I upvoted Gnoc's answer and will upvote yours now that Gnoc corrected it). In any case, the OP already redirected stdout and claimed it failed so presumably, they wanted stderr. Either way, please don't downvote answers unless they are actually *wrong*. - [terdon](#) ♦ Mar 9, 2014 at 17:39
- Wow, Really sorry, i didn't read its post completely. - [PersianGulf](#) Mar 9, 2014 at 17:41
- This did what what requested but with error but it converted my /home directory into file. **WHERE HAS GONE MY _/home_ DIRECTORY** -(- [Nishan](#) Mar 10, 2014 at 6:51
- @Nishan huh? Did you maybe leave a space between `/home/` and `mysql.install.log` ? - [terdon](#) ♦ Mar 10, 2014 at 15:17
